Hiring Manager
[Company Name]

Subject: Application for [Role Title]

Dear Hiring Manager,

I am a final-year B.Tech (CSE – AI & ML) student at Techno India University, and I am excited to apply for the [Role Title] position at [Company Name]. My work so far has centred on one question: how do we get AI systems to produce accurate, trustworthy results? That focus is what I would bring to your team.

Through a Deloitte data analytics virtual experience, I practised analysing structured data, spotting patterns and anomalies, and explaining my findings clearly. During my virtual AI internship at Techno Billion AI, where I earned Grade A, I learned how large language models behave, then spent my time writing, testing, and refining prompts and judging whether the outputs were accurate and useful.

I also build things. My AI Research Assistant Agent, built with GPT-4.1 Mini and live web search, turns a research topic into a structured, sourced brief, with fact-verification rules written directly into its system prompt. I published the configuration, a working API script, and sample output on GitHub. The project taught me that good AI results depend on clear instructions, careful checking, and consistent guidelines, which is the same discipline that data annotation, evaluation, and analytics work demand.

I bring working knowledge of SQL and Databricks, Python, and data analysis, backed by certifications from OpenAI Academy, IBM SkillsBuild, and HP LIFE. I am detail-oriented, comfortable following written guidelines, and quick to learn new tools and workflows.

I would welcome the chance to discuss how I can contribute to [Company Name]. My resume is attached, and my project is available on GitHub. Thank you for your time and consideration.

Sincerely,

Shreyas Sarkar
